1. Bisoution method

let, a= 2, b=3, and the most is between a and b

CONTRACTOR OF STREET

$$C = \frac{2+3}{2} = 2.5$$

$$f(2.5) = -0.6807$$

$$f(2) = 0.4826$$

$$f(0) = -0.0727 = -ve$$

$$C = \frac{2+2\cdot 25}{2} = 2\cdot 125$$

$$f(2.125) = 2000 0.2154$$

$$f(2.25) = -0.0727$$

$$C = \frac{2.125 + 2.25}{2} = 2.1875$$

$$f(0) = 0.0735$$
So, we set $a! = C = 2.1875$

$$f(2.1875) = 200.0735$$

$$f(2.25) = -0.0727$$

$$C = \frac{2.25 + 2.1875}{2}$$

$$= 0.0008$$
So, for next term, $a: = C = 2.21875$

$$f(2.21875) = 0.0008$$

$$f(2.21875) = 0.0008$$

$$f(2.21875) = 0.0008$$

$$f(2.21875) = -0.0727$$

$$C = \frac{a+b}{2} = 2.34375$$
So, ennon = $|b-a|$

$$= 0.03125$$

$$f(u) = e^{5in(u)} - \pi$$

$$f'(u) = e^{5in(u)} \cos(w) - \pi$$
Let, initial guess $\pi_6 = 3$

$$80, \quad \pi_1 = \pi_0 \Rightarrow -\frac{f'(\pi_0)}{f'(\pi_0)}$$

$$= \frac{7}{7} + \frac{-184844}{-2.14044}$$

$$= 2.13626$$

$$\pi_2 = \pi_1 \Rightarrow -\frac{f(\pi_0)}{f'(\pi_0)}$$

$$= 2.13626 - \frac{0.100/9}{-24652}$$

$$= 2.22092$$

$$\pi_3 = \pi_2 - \frac{f(\pi_2)}{f'(\pi_1)}$$

$$= 2.21011$$

$$\pi_4 = \pi_3 - \frac{f(\pi_3)}{f'(\pi_3)}$$

$$= 2.21911 - \frac{-1.56141 \times 10^{-4}}{-2.33399}$$

$$= 2.21911$$

215 - 214 - f (214)

$$= 2.21011 - \frac{-2.14051 \times 10^{-13}}{-2.33009}$$

$$= 2.21911$$

The state of the

2000

70.00

for forward difference Derivative:

$$f'(w) = \frac{4f(u+w) - f(u+zh) - 3f(u)}{2h} + o(h)$$

$$= \frac{4f(4) - f(5) - 3f(3)}{2}$$

fon backward Derivative:

$$f'(u) = \frac{3f(u) - 4f(u-h) + f(u-2h)}{2h} + o(h)$$

$$= \frac{3f(3) - 4f(2) + f(1)}{2}$$

$$= -0.81$$

fon Central Denivative:

$$f'(u) = \frac{f(u+h) - f(u-h)}{2h} + o(h^2)$$

= $\frac{f(u) - f(z)}{2}$

$$= -0.275$$
